

Go CLI app

Assignment

A CLI in GO should be written which takes an `userID` as a parameter. The CLI should fetch all posts including comments from <https://jsonplaceholder.typicode.com/> for this specific `userID`. The result should be outputted in the console to `STDOUT`. The API response as well as the result for output should be marshaled to GO structs before further processing. Additionally, the CLI should provide a `filter` parameter which allows to show only comments which contain the filter text. The output format is free to choose.

Example

```
./go-cli -userId 1 -filter magnam
Posts and comments for user with id 1:
